cut&clamp connection

description

The tried and tested cut&clamp method of termination simplifies the connection of sensors and actuators.

The connection method allows the "on-site" connection of sensors, without having to deploy additional connectors. No special tools are needed for stripping the insulation off cables or for the screw fitting of components.

This allows preferred sensor types with a fixed cable length to be tailored individually in the field. There are no annoying excess cable loops to deal with, which also delivers savings in terms of time and costs. Multiple deployment is possible and the high requirements of protection class IP67 are complied with.

application examples

 pre-fabrication of connectors with fixed-cable devices or connection leads

ACCESSORIES 1300 CABLE SOCKETS, CABLE CONNECTORS

article-no.	VK003S74	VK003S75	VK003S78	VK003S79
version	M8-cable socket straight, 3-pin	M8-cable socket straight, 4-pin	M8-cable connector straight, 3-pin	M8-cable connector straight, 4-pin
	rapid interconnection	rapid interconnection	rapid interconnection	rapid interconnection

assembly instructions

Pull sheath of the cable back in such a way that the individual wires will be showing by about 30mm.

Push coupling ring (a) over the cable. Push cable support sleeve (b) over the cable to touch the sheath of the cable. Push the individual wires through the white fitting sleeve (c) matching the color coding.

Note: With cable sockets the fitting sleeve (c) is colored white and with cable plugs it is grey. As the pin order for sockets is opposite to that for plugs, then any inversion will lead to a short-circuit in the sensor that is connected.

Push fitting sleeve (c) onto cable support sleeve (b) cutting off protruding parts of the individual wires, if any.

Push male or female connector (d) onto the fitting sleeve (c). The fins have been provided for positioning. Screw coupling ring (a) down on male or female connector.

Warning: Never use these devices in applications where the safety of a person depends on their functionality.
